

Gabriel Neves Ferreira da Rocha

Developer

[Recife, Pernambuco], Brazil · Available for remote work +55 (81) 99998-0702 | skickl@l@gmail.com
LinkedIn: [linkedin.com/in/gabriel-rocha-skickle](https://www.linkedin.com/in/gabriel-rocha-skickle) | GitHub: github.com/GabrielNFR

SUMMARY

Back-End Developer focused on Java and Spring Boot. Building REST APIs with Spring Framework, JWT authentication, JPA/Hibernate persistence, and cloud deployment via Docker. Hands-on experience with PostgreSQL and Swagger/OpenAPI documentation. Currently pursuing a Computer Science degree, seeking a first professional opportunity.

FEATURED PROJECT

Heracles Tracker — Workout REST API (full-stack project)

github.com/GabrielNFR/heracles-api

- Built a REST API with **Java 21** and **Spring Boot 4.1**, covering full CRUD for workouts and executions with 5 related entities.
- Implemented stateless authentication with **Spring Security + JWT**, registration/login endpoints, and per-user ownership verification.
- Modeled the relational database with **Spring Data JPA (Hibernate 7.4)**, using PostgreSQL in production (Neon) and H2 in development.
- Wrote **unit tests** with JUnit 5 and Mockito covering services, controllers, and JWT logic.
- **CI/CD pipeline with GitHub Actions** — push to main runs tests and triggers automatic deployment on Render via Deploy Hook.
- Implemented **rate limiting** with bucket4j (100 req/min per IP) and detailed health check with Spring Actuator.
- Documented all endpoints with **Swagger/OpenAPI** (springdoc), including request/response schemas and error codes.
- Containerized with **Docker** (multi-stage build) and deployed on Render; frontend React + TypeScript + Tailwind on Vercel.
- Global error handling with `@ControllerAdvice`, covering validation (400), authentication (401), conflict (409), and internal errors (500).

Other Projects

AstroBeat · github.com/GabrielNFR/AstroBeat - 3D rhythm game built with the raylib library

Mercado Cesar · github.com/GabrielNFR/MercadoCesar - Full-stack web application (Python + HTML + CSS) using the Django framework, with automated testing and deployment.

Customer Churn Analysis · github.com/GabrielNFR/Bank-Customer-Churn-Analysis - Exploratory analysis of factors influencing customer retention and churn in banking, identifying high-risk profiles based on age, gender, nationality, balance, credit card type, and activity level.

STELLA · github.com/GabrielNFR/STELLA---Projeto-2 - Web platform for IVF treatment monitoring built for Clínica AMAR.E, with Django back-end, React + TypeScript + Tailwind CSS front-end, automated tests (API + E2E with Selenium), CI/CD via GitHub Actions, and Azure deployment.

EDUCATION

Bachelor's in Computer Science

UNIT · [Recife, Pernambuco] · [02/2025] - [06/2026] (Transferred to CESAR)

CESAR School · [Recife, Pernambuco] · [08/2026] - [08/2029] (in progress)

SKILLS

- **Languages:** Java, SQL, Python, C, JavaScript
 - **Back-End:** Spring Boot, Spring Security, Spring Data JPA/Hibernate, JWT (jjwt), Bean Validation, REST API, Django, Flask
 - **Data:** NumPy, Pandas, Matplotlib, exploratory analysis
 - **Testing:** JUnit 5, Mockito, unit and integration testing
 - **Databases:** PostgreSQL, H2, relational modeling
 - **CI/CD:** GitHub Actions, automated deployment, Deploy Hooks
 - **Tools:** Git, GitHub, Docker, Maven, Swagger/OpenAPI, Postman, Jira, Microsoft Office (Excel)
 - **Practices:** SOLID, Clean Code, error handling, API documentation, rate limiting
 - **Deploy:** Render, Vercel
-

CERTIFICATIONS

AWS Cloud Practitioner Essentials — AWS Skill Builder ·  [Certificate](#)

Official course on AWS cloud fundamentals: core services, architecture, security, pricing, and support.

JavaScript Essentials 1 — Cisco (OpenEDG JS Institute) · [Badge](#)

Core JavaScript syntax: variables, operators, flow control, functions, data types, debugging, exceptions, and recursion.

Computer Hardware Basics — Cisco · [Badge](#)

Hardware fundamentals: computer and mobile device components, assembly, repair, upgrades, and troubleshooting techniques.

IN PROGRESS

- **Operating Systems** — kernel concepts, processes, threads, virtual memory, and file systems
 - **Data Modeling** — conceptual, logical, and physical modeling, normalization, advanced SQL
 - **AWS Cloud Foundations** — deep dive into AWS services, cloud architecture, and best practices
-
